

AZ delivers C.I.R.O.

... your personal driver in our "credit data management tracer"

Naples, July 14, 2016 - Credit Information Report Online, C.I.R.O. is a new online platform developed by AZ Holding in order to provide its customers with a detailed description of their debtors.

Info-providing activities have always been the strongpoint of the Napolitan company, a business which now has been upgraded in look, feel and skills. With the new portal, the customer will be able to obtain segmented and personalized information on their debtors in a very short time.

C.I.R.O. will be the digital driver that will lead users in search of new cognitive experiences.

The rich database will allow detailed and thorough analyses and make the most of a recovery strategy thanks also to the deep historical data.

C.I.R.O. doesn't just return data, it allows real interactions with customers, building a path tailored to every need.

With over a million fiscal codes you can handle either one single debtor or hundreds of thousands of records quickly and easily from any computer with online access. Thanks to a dedicated area, customers are able to follow the working processes, step by step.

C.I.R.O. has also been designed with the input of the AZ Holding President, Antonino Restino, one of the first graduates in computer science, when he still worked in assembly with punch cards.

"I am very proud of the result, but even more for the vision that guides us as leaders in a strategic field" – states the President Restino - "C.I.R.O. will be a jump forward in terms of info-providing, facilitating the service of credit operations".

Currently the platform is in phase one; soon the platform will enter phase two in which customers will be able to synchronize their debtor database and ensure a true exchange of intelligent information.

The platform was presented July 6, 2016 at an exclusive event, organized by AZ Holding, in the charming location of Villa Crespi.

C.I.R.O.: Smart data for a Smart system.
